# MD-MR

Forensics Hardware Tool Package for Performing Chip-off Forensics

MD-MR is the package of hardware devices to detach the memory from the board of mobile phone or digital device. When the device is severely broken, burnt, or drowned, MD-MR is used as a preliminary step before conducting chip-off forensics. Package includes 5 flash memory sockets for MD-READER, heat blower, soldering station, fume extractor, microscope with optional components of mobile device dryer, rework system and mobile device safety box.

〉 Product Specification
